Il MEG è un prodotto da costruzione **ideale per l'architettura** costituito da un'anima rigida abbinata a una superficie decorativa consistente di resine termoindurenti resistenti alle intemperie. Robusto, compatto e durevole, il MEG è **ideale per l'esposizione all'ambiente esterno**, è resistente alla luce solare e agli agenti atmosferici e garantisce prestazioni tecniche che lo rendono adatto al settore edilizio, dove costituisce un'ottima alternativa ai materiali tradizionali.

Il MEG è disponibile in un'**ampia gamma di decori** ed è personalizzabile grazie alla tecnica di **stampa digitale** che permette di realizzare una facciata ventilata resistente, con una "pelle su misura" che può attingere anche alla propria prospettiva grafica o fotografica.

CARATTERISTICHE SPECIFICHE

Il MEG è costituito da strati di fibre cellulosiche impregnate con resine fenoliche termoindurenti e da uno o più strati superficiali di carta decorativa impregnati con resine termoindurenti aventi speciale protezione alle intemperie, legati chimicamente insieme da un processo ad alta pressione rispondente alla norma EN 438:2005 - 6.

PRINCIPALI APPLICAZIONI

Il MEG viene utilizzato principalmente per il **rivestimento di facciate** (tipicamente facciate ventilate) e di **balconi**, nonché per la realizzazione di **frangisole**, di **arredo urbano** e di **segnaletica esterna**.

FACCIATA VENTILATA

La facciata ventilata è un sistema costruttivo che prevede la creazione di un'intercapedine con ventilazione naturale fra la struttura portante coibentata all'esterno e il rivestimento.

Outdoor Signage

MEG is a construction product that is **ideal for architecture** and is comprised of a rigid core combined with a decorative surface consisting of weather-resistant thermosetting resins. Robust, compact and long-lasting, MEG is **specifically designed for outdoor application**; it is resistant to natural weathering (sunlight and atmospheric agents) providing technical performance that make it suitable for the building sector, where it represents an excellent alternative to traditional materials.

MEG is available in a **wide range of decors** and can be customised thanks to **digital printing technique** that allows you to create a resistant wall cladding with a "customised skin", which can also be implemented based upon your drawings (graphic perspective) or photograph.

SPECIFIC CHARACTERISTICS

MEG consists of layers of cellulose fibres impregnated with thermosetting phenolic resins and of one or more surface layers of decorative paper impregnated with thermosetting resins which have a special weather protection properties, all chemically bonded together by a high pressure process as described in the EN 438:2005 - 6 Standard.

MAIN APPLICATIONS

MEG is mainly used for cladding **façades** (typically rainscreens) and **balconies**, as well as for **sunscreens**, **street furniture** and **outdoor signage**.

RAINSCREENS

A rainscreen is a building system that consists of the creation of a cavity with natural ventilation between the load-bearing structure with external insulation and the cladding.

**Resistente alla luce solare
e alle intemperie**
Resistant to natural weathering

Ottimo comportamento al fuoco
Good fire behaviour

**Facile da lavorare e da pulire,
compatibile con l'ambiente**
Easy to work and clean, eco-sustainable

ABET DIGITAL

Immagina, scatta, crea!

Grazie alla tecnica di stampa digitale il MEG gioca con la creatività. Abet Digital permette, infatti, la realizzazione di qualsiasi immagine, commerciale o suggestiva, per qualunque formato di facciata o dettaglio. Ogni progetto si compone di una caratteristica unica.

Imagine, click, create!

MEG plays with creativity through the use of digital printing techniques. Abet Digital, in fact, allows any commercial or evocative image to be created, for any façade format or element. Every project consists of a unique characteristics.
