

NEST (Cervia/Italy) - Arch. Stefano Focaccia, Arch. Riccardo Bianchi, Ing. Rudy Albrizzi

ABET laminates are part of the NEST project

NEST has been designed wishing to create something not only unique, but special. Every corner of the four flats in the building has been realized with a particular care for each detail which contributes to the comfort of people living a place.

Prestigious, functional and elegant, NEST has been constructed using the most innovative techniques and materials; among these materials, the protagonists of the exteriors of the building are ABET LAMINATI pRaL[®] and MEG (Material Exterior Grade).

A very particular cobwebby structure characterizes the covering of right and left side of the residence. For this original creation of great effect, decor 819 from MEG Standard Collection has been chosen.

Also the fence of the block becomes one of protagonist of the whole: a customized pRaL[®], with a special decoration created specifically to enhance the exclusivity of the project, has been selected to frame NEST.

Design, quality, sustainability: these are the values which distinguish NEST, the result of a new way to imagine architecture looking for the perfect union of stylistics avant-gard and the needs of contemporary living.
