

Parqcolor® clicks!

Parqcolor® enriches its ranges with the glue-less click joining system

Founded in the 70s, PL joins the Abet Group in 1978. The great manufacturing capability of the company - which covers an area of 40.000 square meters in the industrial district of Como - is the result of careful research carried out in the field of stratified and postformed components such as Coeso®, using primarily high pressure laminates (Print® HPL by ABET LAMINATI). PL is in the forefront of technology and creativity and it has been able to create privileged connections with leading designers and architects, in order to be a forerunner in interpreting the changing aesthetic trends.

The synergy between technology and aesthetics has produced the extended PL's range of products for interior design, for example the wall cladding Parqwall® and Silentwall®.

In 1989 Parqcolor® was developed, the flooring product made of HPL laminate and featured with innovative technical characteristics. Parqcolor® is extremely resistant, suitable for both commercial and residential applications, even for high traffic areas. Thanks to its wide range of décor and colours, Parqcolor® is able to answer to the technical and aesthetic needs of any environment.

PARQCOLOR® CLICK

Nowadays PL enriches its offer, thus adding the glue-less click joining system by Flooring Industries™ to the glue based system already in use.

The glue-less click joining system is the most common system of flooring application in the worldwide sector and is available for the Parqcolor® Gold and Parqcolor® Vintage ranges of floorings.

This way, the floorings of the collections Gold and Vintage move from class 32 to class 33 and they improve their abrasion resistance from AC4 to AC5.

Thanks to the possibility to exploit both the glue-less click joining system and the glue based system, PL is able to offer a wider range of options, all characterized by high technical features.
